Motion Sensing Street Lighting

Evaluation Offer

Save large amount of energy with Comlight's Motion Sensing Streetlight Control System.

Comlight Eagle Eye is an intelligent motion sensing control system that automatically activates the streetlight as soon as vehicles or pedestrians are detected in the area. When no activity, the light is set to an optional minimal light level. Eagle Eye can work as a completely stand-alone system, simply install and forget, or easily interface it to any 3rd party CMS software through WEB API.

Order and evaluate the street lighting concept of the future!

“Energy efficiency in public lighting is a very important topic for us. It is part of our corporate philosophy to test new lighting technologies and solutions such as the new Comlight system.”

“We are very much satisfied with the system, and we are convinced that Comlight is a solution for the future. Therefore we will plan new installations with Comlight soon.”

Jörg Haller, Head of Public Lighting, EKZ Zürich
